✓ **Classified as a mild skin irritant.**

✓ **D.O.T. classification: Non-regulated**

✓ **Non-fuming**

and

✓ **it works better.**

We guarantee it!

For years manufacturers have relied on hydrochloric, muriatic and phosphoric acids and acid compounds to formulate restroom cleaners. These acids are effective and relatively cheap to use. They can also have some nasty side-effects. Skin burns and toxic fumes are but two of the health and safety hazards associated with acids. Damage to surfaces cleaned can result in expensive replacement costs. Hazardous material classification can incur hidden costs in shipping, handling, storage and disposal.

High-Stile is made with new technology designed to address these problems. Dermal irritation tests performed on the pure base active ingredient in High-Stile resulted in a classification as "mild skin irritant". *It is exempt from special safety equipment requirements mandated by OSHA's Personal Protective Equipment Standard (29 CFR Part 1910) and is classified as a non-regulated commodity by the D.O.T.

Talk is cheap ... but superior performance is valuable. High-Stile cleans so well you must see it to believe it. Give us a minute of your time and an ounce of your current product and we will prove that a safer product can be a better cleaner.

No risk trial offer. Place an order for one case of High-Stile. Use one gallon. If you are not satisfied that High-Stile is a safer, better product return the rest of the case within 30 days for full credit.
