PASS
Problem Area Stripper Solution

The problems ...

Confined areas and vertical surfaces

Removing multiple coats of hardened, discolored floor finish can be a challenging job under ideal circumstances. But, if the build-up is behind a toilet, under a church pew, beneath a drinking fountain or on baseboards or stair risers, the job becomes a lot tougher. Accumulations easily removed with a good stripper, a floor machine and a stripping pad in a few minutes can take hours of manual scrubbing in a problem area.

Liquid strippers and aerosols foams ...

Not the answer

Today's re-emulsifying strippers work great on normal accumulations, on level floors, in open areas. But, they tend to evaporate in a few minutes, so heavy build-ups in corners or edges can require several applications before they break through ... assuming the floor is level so the stripper does not run off and pool where it is not needed. A waste of time and product. **Not the answer.**

Aerosol foam strippers are usually suggested for baseboards and risers. But they do not really cling very long before the foam breaks ... and they tend to be messy ... and a can does not cover much area ... and they are generally rather pricey. **Not the answer.**

PASS ... The solution

PASS is a new generation, re-emulsifying stripper formulated with a unique jelling agent that controls evaporation and allows targeted application to problem areas. It clings to vertical surfaces and dissolves heavy accumulations with a minimum of manual scrubbing. Inaccessible areas, caked with 25-30 coats of discolored finish can be soak stripped with a single application ... without run-off or puddling. **PASS ... the answer.**

Wayne®

PASS

Problem Area Stripper Solution

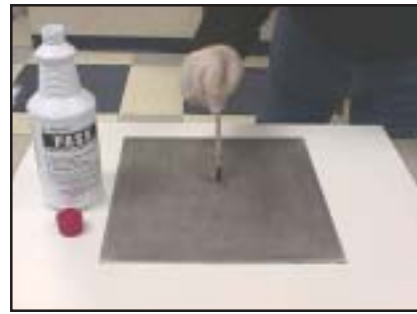

PASS ... Unique jelled formula.
Stays wet for hours ... eliminates reapplication.
Clings to baseboards and stair risers.
Reduces manual scrubbing ... saves hours of labor.
Twice the coverage of aerosols ... economical use cost.

Use on ... Baseboards, stair risers, corners and edges, under counters
and church pews

Watch PASS at work ... targeted stripping

White tile prepared with 30 coats of finish and black dye.

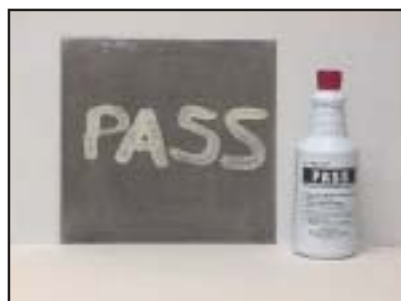

PASS painted on tile with brush.

Tile placed in vertical position for 10 minutes.

10 minutes later area scrubbed with pad and warm water.

Rinsed tile shows effectiveness of targeted stripping with PASS.
