High gloss Low maintenance Floor Finish

Respect is a high performance acrylic floor polish formulated to deliver exceptional durability and appearance with minimum maintenance. Self-sealing, Respect requires no undercoat prior to application. High solids content fills and finishes porous floors to a lustrous shine with fewer coats than conventional products. Respect forms a tough clear film that resists black heel marks, scuffs and scratches. When periodic maintenance is required, Respect can be restored to a brilliant gloss by spray buffing or high speed burnishing with Wayne Reply Burnishing Compound.

Serving the maintenance community since 1933
