

BioSolv

HEAVY DUTY TRAP and LINE MAINTAINER FOR PROBLEM GREASE CONDITIONS

Regular treatment keeps waste and grease from accumulating in your pipes causing slow, or even clogged drains.

Biochemical action

Billions of natural, non-pathogenic bacteria produce dense concentrations of enzymes to digest and liquify organic waste and reduce or eliminate solids accumulation in drain lines and traps.

Fortified with natural citrus solvent

While bacterial action is relentless and ultimately effective, like most of nature's wonders it tends to proceed at a measured pace. Well formulated biochemical treatments are generally satisfactory for normal drain maintenance. However, commercial kitchens (particularly those in use around the clock) can produce a volume of waste greater than the bacterial population's capacity to digest in the time allowed. BioSolv contains a natural solvent derived from citrus to speed bacterial action by penetrating, softening and loosening caked grease and organic waste accumulations. Thinned solids are more rapidly exposed to bacterial activity so that greater volumes of waste can be digested with the same amount of time and material.

Safe, biodegradable formula

BioSolv contains no dangerous acids, caustics, chlorinated solvents or petroleum distillates. All chemical components used in its formula are fully biodegradable and considered environmentally friendly.

Controls cost

Preventative maintenance program eliminates mess, bother and expense of stoppages, overflow and system failures ... eliminates emergency service calls.

Product# J11BS5 5 Gallon Pail
J11BS55 55 Gallon Drum

Manufactured by:
Wayne Concept Manufacturing Co., Inc.
Fort Wayne, IN 46825 260-482-8615

Serving the maintenance community since 1933
