

# Red Blitz

## Tough Job Finish Liquefier

- ✦ Strips to the tile
- ✦ No rinse
- ✦ Low pH
- ✦ No residue
- ✦ Low foam
- ✦ Safe on VCT, tile, slate, marble, terrazzo or stone
- ✦ Reduced odor

The dictionary defines Blitz as “the act of attacking with sudden and irresistible force”.

Anyone who has ever been tangled up with a really tough floor stripping job has wished for an aggressive stripper that would attack with overwhelming power ... a stripper like Red Blitz.

Red Blitz is the breakthrough formula finish liquefier designed to conquer the worst stripping tasks. From the moment it hits the floor, Red Blitz begins to penetrate and liquify layer after layer of aged or hard burnished finish with relentless efficiency ... all the way to the tile. Time spent waiting and scrubbing is cut to a minimum. Re-application due to incomplete removal is virtually eliminated. Dissolved finish is reduced to a thin liquid, not a gummy slurry, that is easily removable with a floor squeegee or wet vac.

Red Blitz achieves its remarkable efficiency through the synergistic interaction of water soluble solvents and penetrants ... not the brute force of caustic. In fact, Red Blitz is made with a lower pH than most competitive products so it is safe to use on alkali sensitive floors like natural stone and marble as well as resilient flooring. Since Red Blitz leaves no alkaline residue, time and material spent neutralizing and flood rinsing is replaced with a quick, clear water, detail rinse.

In short, Red Blitz is the product with the advantages you need. Try some on your next stripping job.

Product #'s:	Packs:
J11RBZ1	1 gallon
J11RBZ5	5 gallon pail
J11RBZT	275 gallon tote
